WORLEY LIMITED (WORLEY)

(ASX: WOR)

Drax awards Worley a services contract for carbon capture units at UK power station

Drax Power Limited (Drax) has awarded Worley a services contract for the first two carbon capture units at its power station in North Yorkshire, UK. The carbon capture units will be integrated into the biomass power generating units that have a total capacity of 2,580 MW.

Under the contract, Worley will provide pre-FEED (front-end engineering and design) services for the carbon capture units, which includes development of plant layout, cost estimation and schedules for FEED, detailed engineering, procurement and construction.

The award of this contract is strategic because it provides further indication of the increasing use of both biofuels and carbon capture in the global energy system.

The carbon capture units will incorporate negative emissions technology, Bioenergy with Carbon Capture and Storage (BECCS), generating renewable electricity while permanently removing carbon dioxide from the atmosphere. BECCS has been successfully piloted by Drax and each carbon capture unit is expected to capture approximately 4 million tonnes of carbon dioxide a year.

The services will be executed by Worley's team from Brentford, UK.

"As a global professional services company headquartered in Australia, we are pleased that Drax has engaged Worley in this important carbon capture project. The contract supports Drax's goal of becoming a world-leading, carbon-negative company by 2030, whilst also supporting Worley's strategic focus on sustainability and delivering a more sustainable world", said Chris Ashton, Chief Executive Officer of Worley.

Authorised for release by Nuala O'Leary, Group Company Secretary.
